

Notes:

This report lists all commands available in the current FrameMaker environment (version & language) at runtime.

All modifications of the commands (via FM cfg file, CustomUI.cfg, script or plug-in) are shown.

The command sequence in this report corresponds to their initialization by FrameMaker. The group titles for the report are read from the corresponding comment lines of the FM-cfg files.

First, those commands defined in the configuration file 'cmds.cfg' file are listed.

Then the equation commands from the 'mathcmds.cfg' file are listed.

In the configuration file 'wincmds.cfg' primarily platform-specific keyboard shortcuts are added to the commands that have already been initialized; a few new Windows-specific commands are, however, also defined.

FrameMaker then subsequently initializes the command modifications of the configuration file 'CustomUI.cfg' (also refer to MicroType's [ToolbarPlus Express](#) [Express Customization] on this).

In conclusion, those commands in this report that are defined by API clients (plug-ins) are listed. Among these are all FrameScripts that are installed.

The 'FC Dec' column renders the FM commands internal code in decimal format. It can be used in order to call up the respective command, with FrameScript for example:

```
Execute FC 770;
```
