

## Internal code table

The small character (sequences) below a row indicate the reference characters needed in ESC sequence or the CTRL-q sequence (see note).

Use one of these methods for characters not on the keyboard:

Escape sequences

Characters in rows 80 and 90 are created with esc sequences, e.g. to get a Å type ESC, \*, A (3 key strokes).

CTRL-q sequence

Characters in rows a0 ... f0 are created with CTRL+q, followed by a character from the ASCII code page at a corresponding location ( $loc_{ascii} = loc_{fm} - 80_{hex}$ ); e.g. to get a þ type CTRL+q, W (2 keys).

Characters in shaded areas are only available on the Mac.
