Adobe FrameMaker (2015 release)

Easily author bidirectional technical content and publish across mobile devices

Adobe FrameMaker (2015 release) is a complete solution for bidirectional technical content. Publish natively across channels, mobile devices and formats, without any plug-ins. Author with best-in-class XML/DITA support using a simplified authoring environment. Collaborate seamlessly with subject matter experts, even on mobile devices. Manage content using out-of-the-box integration with leading CMSs and the cloud. Leverage the proven strengths of FrameMaker to handle long, complex documents.

Experience best-in-class XML authoring—Now author DITA content with DITA 1.3 support. Work faster with enhanced Structure view, inline MathML equations and reduced EDD customization time. Empower your SMEs to work in the simplified form-like XML environment, without knowing XML.

Leverage support for Arabic and Hebrew—Serve global markets by translating content into RTL languages, Arabic, Hebrew, and Farsi. You can also author and publish in RTL languages, and include mixed bidirectional content in the same paragraph, document, book, or DITA map.

Publish to mobile devices and multiple formats—Natively publish from FrameMaker across channels, mobile devices and formats, including mobile apps. Provide relevant content faster with new content filters, and enhance the consumption experience with the new HTML5 layout. Embed custom fonts in EPUB files, customize WebHelp skins, and include SVG graphics in HTML5 output.

Work smarter, accomplish more—Collaborate efficiently with smoother import of Microsoft Word files and a built-in packager. Do more with tables. Work productively with mini TOCs, visual indicators that identify conditions applied to various types of content, application of conditional text at the book level, and an enhanced UI.

VERSION COMPARISON CHART

Available ○

Enhanced ●

Adobe FrameMaker	2015 release	12	11	10	9
XML Authoring
